1. Campaign Launch Checklist

GoUp Performance Marketer Toolkit

1. Campaign Launch Checklist

PURPOSE

Use this checklist before publishing any Meta campaign for a client or your own business. The goal is simple: do not enter Ads Manager before the business, offer, funnel, creative and tracking are ready.

AGENCY RULE

A campaign should not be launched because the ad is ready. It should be launched only when the complete path from impression to business outcome is ready.

1. BUSINESS & OFFER READINESS

- Business goal is clearly defined: leads, sales, calls, appointments, messages or another measurable outcome.
- Primary offer is clear in one sentence.
- Price, eligibility, location and important conditions are confirmed.
- The campaign has one primary conversion goal.
- Target customer problem, desire and buying motivation are documented.
- Competitor/market context has been reviewed.
- Client has approved the offer and campaign objective.

2. FUNNEL READINESS

- Conversion path is mapped: Ad → Landing Page / Instant Form / WhatsApp → Qualification → Sales → Follow-up → Sale.
- Landing page or lead form matches the promise made in the ad.
- Form asks only necessary questions.
- Thank-you page / confirmation process is working.
- WhatsApp, call or CRM destination is tested.

- Lead owner is assigned.
- Expected response time for new leads is agreed.
- Follow-up process exists for no-answer and not-ready leads.

3. TRACKING & TECHNICAL SETUP

- Correct Meta Business Portfolio is being used.
- Correct Facebook Page and Instagram account are connected.
- Correct ad account is selected.
- Pixel/Dataset is installed where required.
- Important events are configured and tested.
- Conversions API is checked where applicable.
- Domain and landing-page URLs are correct.
- UTM parameters are added when required.
- CRM or lead notification integration is tested.
- Test lead / test purchase has been completed successfully.

4. CAMPAIGN STRUCTURE

- Objective matches the actual business outcome.
- Buying type and conversion location are intentionally selected.
- Campaign naming follows a clear format.
- Budget type is intentional: campaign budget or ad-set budget.
- Daily/lifetime budget is approved.
- Geography is accurate.
- Age/gender restrictions are used only when strategically justified.
- Audience exclusions are checked.
- Retargeting audiences are separated where needed.
- Placements are intentional.
- Attribution and optimization event are checked.

Suggested naming format:

CLIENT | OBJECTIVE | OFFER | AUDIENCE | MONTH/YEAR

5. CREATIVE READINESS

- Minimum 3 different creative angles are available for testing.
- Creatives are not only visual variations of the same idea.
- First 2–3 seconds communicate a strong reason to continue watching.
- Ad clearly identifies the right customer or problem.
- Offer and CTA are easy to understand.
- Video has readable captions/subtitles where needed.
- 9:16 assets are checked for Reels/Stories.
- 1:1 or 4:5 assets are available when appropriate.
- Brand/logo/product visibility is sufficient.
- Claims can be supported.
- Creative and landing page communicate the same promise.

6. COPY & COMPLIANCE

- Primary text has a clear opening.
- Headline supports the main offer.
- CTA matches the next step.
- Copy avoids unnecessary jargon.
- Copy is written for the customer, not for the marketer.
- Personal-attribute, unrealistic, misleading or prohibited claims are reviewed.
- Spelling, pricing, dates, contact information and location are verified.

7. SALES TEAM READINESS

- Sales team knows the campaign is going live.
- Lead qualification questions are agreed.
- Sales script matches the offer.
- CRM stages/statuses are ready.
- Follow-up cadence is defined.
- Team understands what makes a lead qualified vs unqualified.
- Feedback loop between marketing and sales is agreed.

8. FINAL PRE-LAUNCH CHECK

- Preview every placement.

- Click every link.
- Submit one test lead.
- Check mobile experience.
- Check payment/booking/form flow if applicable.
- Verify budget and schedule.
- Verify destination, Page, Instagram account and CTA.
- Confirm tracking fires correctly.
- Capture the launch baseline: current CPL/CPA, lead quality, conversion rate or previous benchmark if available.

GO / NO-GO DECISION

GO: Business goal + offer + funnel + tracking + creative + sales process are ready.

NO-GO: Any critical conversion-path or tracking issue is unresolved.

POST-LAUNCH NOTE

Do not judge a campaign from one metric alone. Track platform performance and business quality together: Spend → Clicks → Leads/Sales → Qualified → Appointment/Site Visit → Revenue.

GoUp Agency Practice Note

A strong campaign is not only a media-buying setup. It is the combination of marketing fundamentals, creative, funnel, tracking and sales execution.

This structure is the one I'd keep consistently across all the toolkit documents.

2.Creative Strategy Framework

Creative Strategy Framework

PURPOSE

Use this framework to build creative strategy before designing ads. The goal is not to produce many creatives. The goal is to test different reasons why the customer should stop, care, believe and act.

CORE PRINCIPLE

Creative testing ≠ changing only colours, music or thumbnails.
Creative testing = testing different customer problems, desires, angles, proof, formats and messages.

THE GOUP CREATIVE STRATEGY MODEL

Audience → Problem/Desire → Angle → Hook → Proof → Offer → CTA → Format

1. DEFINE THE AUDIENCE

Primary customer:

Age / life stage:

Location:

Business/career situation:

Main problem:

Main desire:

What have they already tried?

What do they currently believe?

What stops them from buying?

What would make them trust us?

2. CHOOSE THE CUSTOMER AWARENESS LEVEL

Unaware: Customer does not clearly recognise the problem.

Problem-aware: Customer knows the pain, but not the solution.

Solution-aware: Customer knows possible solutions.

Product-aware: Customer knows your product/service but has not acted.

Most-aware: Customer already trusts the offer and needs a reason to act now.

AGENCY USE

Cold campaigns usually need problem, desire, education and proof.

Warm campaigns can be more direct with offer, objection handling and conversion-focused creative.

3. CREATIVE ANGLE BANK

Pain / Problem Angle

Show the cost of the problem and why the current approach is not working.

Outcome / Desire Angle

Lead with the result or transformation the customer wants.

Educational Angle

Teach one useful idea that makes the customer rethink the problem.

Myth / Mistake Angle

Challenge a common assumption or expose a costly mistake.

Comparison Angle

Compare two approaches, strategies, products or outcomes.

Case Study Angle

Show what was done, why it was done and what happened.

Founder / Expert Angle

Use a knowledgeable person to explain the strategy directly.

Testimonial / Customer Story Angle

Use genuine customer experience and specific proof.

Demonstration Angle

Show the product, service, process or result in action.

Objection Angle

Directly answer price, trust, time, complexity, quality or risk objections.

Behind-the-Scenes Angle

Show how the work is actually done.

Offer Angle

Communicate a strong, specific offer with a clear next step.

4. BUILD THE HOOK

A good hook earns the next 3–5 seconds.

Hook types:

- Call out the audience: “If you run a local business and Meta leads are not converting...”
- Call out the problem: “Your CPL may be low, but your campaign can still be losing money.”
- Contrarian: “A ₹500 lead can be better than a ₹50 lead.”
- Curiosity: “We changed one part of this campaign and the lead quality improved.”
- Specific outcome: “Here is how we would structure a ₹30,000 monthly lead-gen budget.”
- Mistake: “Do not scale this campaign just because CPL dropped.”
- Question: “Are your salespeople saying every Meta lead is bad?”
- Proof: “This account generated X leads. Here is what we learned.” Use only genuine, supportable numbers.

5. PROOF LADDER

Weak proof: “We are experts.”

Better proof: Explain the process.

Stronger proof: Show actual screen/process/example.

Strongest practical proof: Verifiable case study, customer outcome or documented campaign learning.

Never invent numbers or results to make the creative stronger.

6. CREATIVE BRIEF TEMPLATE

Campaign:

Objective:

Audience:

Awareness level:

Problem/desire:

Creative angle:

Core insight:

Hook:

Main message:

Proof:

Offer:

CTA:

Format:

Duration:

Visual direction:

Required footage/assets:

Variants to test:

Compliance notes:

7. FORMAT DECISION

Founder Talking Head: best for trust, education, objection handling.

UGC/Testimonial: best for social proof and relatability.

Screen Recording: best for software, dashboards and teaching.

Product/Service Demo: best when seeing the experience matters.

Voice-over + B-roll: best for visual businesses and storytelling.

Static/Image: best for strong simple messages, offers, proof or retargeting.

Carousel: best for step-by-step, comparison, features or education.

8. TESTING MATRIX

Do not create 10 ads with one message. Build a matrix:

Angle A: Problem
Hook 1 / Hook 2
Format: Talking head / Static

Angle B: Case Study
Hook 1 / Hook 2
Format: Talking head / Screen recording

Angle C: Objection
Hook 1 / Hook 2
Format: Talking head / Carousel

This creates message diversity, not only visual diversity.

9. CREATIVE REVIEW SCORE

Score each area from 1–5 before launch:

Audience clarity:

Hook strength:

Problem/desire relevance:

Message clarity:

Proof strength:

Offer clarity:

CTA clarity:

Native-to-platform feel:

Brand consistency:

Compliance confidence:

Interpretation:

40–45 = strong launch candidate

30–39 = improve weak areas

Below 30 = do not launch without revision

10. POST-LAUNCH CREATIVE DIAGNOSIS

Low thumb-stop / weak first seconds → improve hook or visual opening.

Good watch time, poor clicks → message may be interesting but offer/CTA is weak.

Good CTR, poor conversion → inspect landing page, lead form, offer or audience quality.

Good CPL, poor qualified leads → creative may be attracting the wrong intent.

High frequency + falling response ➜ creative fatigue may be developing.

CREATIVE LEARNING LOG

What did we test?

What happened?

What customer insight did we learn?

What should the next creative test?

GoUp Agency Practice Note

The purpose of creative testing is not to “find a winning video.” It is to learn which message, proof and offer consistently move the right customer.

3. Ad Copy Frameworks.

Ad Copy Frameworks

PURPOSE

Use these frameworks to write Meta ad copy that is clear, customer-focused and aligned with the funnel. Do not copy blindly. Adapt the structure to the business, audience and awareness level.

THE BASIC COPY FLOW

Hook → Problem/Desire → Insight → Solution → Proof → Offer → CTA

FRAMEWORK 1: PROBLEM → CONSEQUENCE → SOLUTION

Hook:

[Call out the problem]

Problem:

[Describe what the customer is experiencing]

Consequence:

[Explain why it matters]

Solution:

[Introduce the mechanism / offer]

Proof:

[Use real proof, process or credibility]

CTA:

[Tell the customer the next step]

Best for: Lead generation, local services, education, B2B.

FRAMEWORK 2: OUTCOME → MECHANISM → PROOF → CTA

Desired outcome:

[What does the customer want?]

Mechanism:

[How does your offer help achieve it?]

Proof:

[Why should they believe you?]

CTA:

[Apply / Enquire / Shop / Book / Learn more]

Best for: Clear outcome-driven offers.

FRAMEWORK 3: MISTAKE → REFRAME → ACTION

Opening:

“Most [audience] focus on _____. But the real issue is _____.”

Explain:

[Why the common approach is incomplete]

Reframe:

[What should they focus on instead?]

Action:

[How your offer helps]

CTA:

[Next step]

Best for: Educational ads, expert/founder positioning.

FRAMEWORK 4: CASE STUDY COPY

Context:

[Type of business / situation]

Challenge:

[What was not working?]

Strategy:

[What did we change/do?]

Result:

[Only genuine, supportable result]

Learning:

[What should the reader understand?]

CTA:

[Invite the relevant customer to take the next step]

Best for: Warm audiences, B2B, agency, high-trust services.

FRAMEWORK 5: OBJECTION HANDLING

Objection:

“You may be thinking _____.”

Acknowledge:

[Show you understand the concern]

Clarify:

[Explain the reality]

Reduce risk:

[Process, transparency, demonstration, trial, guarantee only if real]

CTA:

[Simple next step]

Common objections:

Price / Time / Trust / Complexity / “I tried before” / “Will this work for my business?”

FRAMEWORK 6: PAS

Problem:

State the problem clearly.

Agitate:

Show the frustration, cost or consequence without exaggeration.

Solution:

Introduce the offer and explain why it is relevant.

Best for: Pain-aware customers.

FRAMEWORK 7: AIDA

Attention:

Strong opening.

Interest:

Relevant problem or insight.

Desire:

Benefits, proof, outcome.

Action:

One clear CTA.

Best for: General-purpose ads and short landing-page copy.

META PRIMARY TEXT BUILDER

Line 1 – Hook:

Line 2–3 – Problem/desire:

Line 4–6 – Main insight/solution:

Line 7 – Proof:

Line 8 – Offer:

Line 9 – CTA:

HEADLINE FORMULAS

- Get [Outcome] Without [Major Friction]
- [Specific Offer] for [Audience]
- Stop [Painful Situation]. Start [Desired Situation].
- [Number] Ways to [Outcome]
- Learn How to [Specific Skill/Outcome]
- Book Your [Consultation/Demo/Visit]
- [Product] Built for [Audience]
- Ready to [Desired Action]?

DESCRIPTION / SUPPORTING LINE

Use the description only to reinforce one important point: location, eligibility, limited condition, starting price, delivery, guarantee if real, or next-step clarity.

CTA MATCHING GUIDE

Learn More → education / consideration / detailed landing page

Sign Up → registration / webinar / course / account creation

Apply Now → qualification-driven offer

Book Now → appointment / consultation / service slot

Shop Now → ecommerce purchase

Get Quote → service pricing

Send Message / WhatsApp → conversation-led funnel

COPY QUALITY CHECK

- Is the first line relevant without reading the rest?
- Does the copy talk about the customer more than the company?
- Is the main problem/desire specific?
- Is there one primary message?
- Is the proof genuine?
- Is the offer easy to understand?
- Is the CTA clear?
- Does copy match the creative?
- Does copy match the landing page/form?
- Can unnecessary words be removed?

COPY ADAPTATION TEMPLATE

Business:

Offer:

Audience:

Awareness:

Problem:

Desire:

Proof available:

Main objection:

CTA:

Chosen framework:

Draft 1:

Draft 2:

Draft 3:

AGENCY REVIEW

Do not approve copy because it “sounds creative.” Approve it when it communicates the right message to the right customer and supports the conversion path.

GoUp Agency Practice Note

Good ad copy does not compensate for a weak offer. Copy should make a valuable offer easier to understand, believe and act on.

4. Funnel Mapping Template

Funnel Mapping Template

PURPOSE

Map the complete customer journey before building campaigns. Meta Ads is only one traffic source. Performance depends on what happens before the click, after the click and after the lead.

FUNNEL VIEW

Attention → Interest → Action → Qualification → Sales Conversation → Follow-up → Conversion → Retention/Referral

1. BUSINESS OUTCOME

What is the final business outcome?

[Sale / Admission / Appointment / Site Visit / Purchase / Subscription / Other]

Average order/deal value:

Gross margin or contribution margin if known:

Target monthly sales:

Target monthly revenue:

Maximum acceptable acquisition cost:

Primary conversion event Meta should optimize for:

2. CUSTOMER

Primary audience:

Main problem:

Main desire:

Trigger that makes them start searching:

Top 3 objections:

Trust signals they need:

Decision maker:

Typical decision time:

3. OFFER

Core offer:

Price / starting price:

What is included:

Why choose this offer:

Proof available:

Risk-reversal / guarantee if genuinely offered:

Urgency or deadline if genuine:

Primary CTA:

4. TRAFFIC / ATTENTION

Channel:

Meta Ads / Instagram Organic / Google Ads / YouTube / Referral / Other

Cold audience:

Warm audience:

Retargeting audience:

Key creative angles:

Primary hook:

Primary promise:

Budget:

5. CONVERSION POINT

Choose the main path:

Ad → Instant Form

Ad → Landing Page → Form

Ad → WhatsApp

Ad → Product Page → Checkout

Ad → Booking Page

Ad → Call

Other:

What information must the customer receive before converting?

What questions are asked?

What friction could reduce conversion?

What qualifies a good conversion?

6. LEAD / CUSTOMER HANDOFF

Where does the lead/order go?

CRM:

WhatsApp:

Email:

Salesperson:

Automation:

Notification method:

Maximum response time:

Who owns the next action?

7. QUALIFICATION

Qualified-lead definition:

Required budget:

Required location:

Required need:

Required timeline:

Decision-maker status:

Other criteria:

Qualification questions:

1.
2.
3.
4.
5.

8. SALES PROCESS

First contact method:

First call/message objective:

Discovery questions:

Offer presentation:

Objection handling:

Follow-up cadence:

Appointment/demo/site-visit process:

Closing step:

Payment/booking process:

9. FOLLOW-UP

Day 0:

Day 1:

Day 3:

Day 7:

Day 14:

Long-term nurture:

No-answer process:

Not-ready process:

Lost-lead reason tracking:

10. MEASUREMENT

Platform Metrics:

- Spend
- Reach
- Impressions
- CPM
- CTR
- CPC
- Leads / Purchases
- CPL / CPA

Business Metrics:

- Contact rate
- Qualified lead rate
- Appointment/demo/site-visit rate
- Show-up rate
- Close rate
- Revenue
- CAC
- ROAS / contribution after marketing cost

FUNNEL DIAGNOSTIC

High CPM → audience/auction/creative context.

Low CTR → creative/message relevance.

Good CTR + low landing conversion → page/offer/friction.

Good lead volume + low contact rate → bad data, delayed response or weak lead intent.

Good contact rate + low qualified rate → targeting/message/offer mismatch.

Good qualified rate + low appointments → sales script / value / scheduling issue.

Good appointments + low close rate → sales, offer, price, trust or product-market fit issue.

11. FUNNEL MATH

Monthly ad spend:

Expected CPL/CPA:

Expected leads/conversions:

Expected qualification rate:

Expected qualified opportunities:

Expected appointment rate:

Expected appointments:

Expected close rate:

Expected sales:

Expected revenue:

Do not use these as promises. Use them as planning assumptions, then replace assumptions with actual data.

12. ONE-PAGE FUNNEL MAP

TRAFFIC

⬇

BUSINESS OUTCOME

Sale/Booking:

Revenue:

CAC:

FUNNEL REVIEW QUESTIONS

- Is every stage owned by someone?

- Can we track movement between stages?
- Does the ad promise match the sales conversation?
- Is lead quality defined?
- Is response time acceptable?
- Are lost reasons documented?
- Can we calculate cost per qualified opportunity, not only CPL?

GoUp Agency Practice Note

A campaign cannot be judged only inside Ads Manager. The real funnel continues until the business outcome.

5. Client Campaign Audit Checklist

Client Campaign Audit Checklist

PURPOSE

Use this before taking over, restructuring or recommending changes to an existing Meta ad account. Audit first. Do not change campaigns before understanding the business, historical data, tracking, creative and sales quality.

AUDIT PRINCIPLE

The goal is not to find “mistakes” in Ads Manager. The goal is to identify where performance is being lost across the full acquisition system.

1. BUSINESS CONTEXT

- Business model understood.
- Primary products/services identified.
- Price / average order value / deal value understood.
- Main target locations confirmed.
- Target customer segments documented.
- Sales cycle understood.
- Current monthly marketing budget confirmed.
- Main business KPI agreed.
- Seasonality or promotional periods identified.

Notes:

Strengths:

Constraints:

Main hypothesis:

2. ACCOUNT & ACCESS HEALTH

- Business Portfolio ownership checked.
- Ad account ownership/access checked.

- Facebook Page connected.
- Instagram account connected.
- Payment method/account status checked.
- Account quality/restrictions reviewed.
- Partner/user permissions reviewed.
- Naming structure understandable.

Risk / action required:

3. TRACKING AUDIT

- Pixel/Dataset exists and is installed.
- Correct events are firing.
- Conversion event matches campaign goal.
- Event quality / duplication issues checked.
- Conversions API checked where applicable.
- Domain/URLs checked.
- UTMs used consistently where required.
- CRM / lead delivery integration checked.
- Test event or test lead completed.
- Reported Meta conversions compared with business/CRM data where possible.

Tracking confidence:

High / Medium / Low

4. HISTORICAL CAMPAIGN REVIEW

Review at least the most relevant recent period plus previous winners where available.

For each major campaign record:

Campaign:

Objective:

Spend:

Result:

CPL/CPA:

CTR:

CPC:

CPM:

Frequency:

Conversion rate:

Qualified lead / sales quality:

What changed over time:

Keep / Investigate / Stop / Rebuild:

Do not judge a campaign only by current status. Check previous edits, budget changes, creative changes and business-side outcome.

5. AUDIENCE AUDIT

- Geography makes sense.
- Age/gender restrictions are justified.
- Broad vs interest vs custom audience strategy reviewed.
- Retargeting audiences checked.
- Customer/purchaser exclusions checked where needed.
- Audience overlap or excessive fragmentation reviewed.
- Lookalike source quality reviewed.
- Audience size is appropriate for budget and objective.

Key audience learning:

6. CREATIVE AUDIT

- Top spend creatives identified.

- Top outcome creatives identified.
- Poor-quality/high-spend creatives identified.
- Different creative angles exist.
- Hooks are strong.
- Offer is clear.
- Proof is credible.
- CTA is clear.
- Format/placement coverage is adequate.
- Creative fatigue/frequency reviewed.
- Comments/social feedback reviewed where relevant.
- Creative message matches landing page.

Creative gaps:

Next 3 angles to test:

7. COPY & OFFER AUDIT

- Customer problem/desire is clear.
- Offer is differentiated.
- Pricing/conditions are transparent where appropriate.
- Copy matches awareness level.
- Headlines support the offer.
- Claims are supportable.
- CTA matches funnel.
- Objections are addressed.
- Ad and landing-page message are consistent.

Offer improvement ideas:

8. LANDING PAGE / LEAD FORM AUDIT

- Mobile speed/usability checked.
- Headline matches ad promise.
- Main CTA is visible.
- Form length is appropriate.
- Trust/proof is visible.

- Important objections are handled.
- Confirmation/thank-you experience works.
- Lead data is captured correctly.
- Payment / booking / WhatsApp links work.
- Conversion tracking works.

Main friction:

9. SALES & LEAD QUALITY AUDIT

- Lead response time known.
- Contact rate measured.
- Qualified lead rate measured.
- Appointment/demo/site-visit rate measured.
- Close rate measured.
- Lost-lead reasons tracked.
- Sales script/process reviewed.
- Follow-up cadence reviewed.
- Marketing receives lead-quality feedback.

Marketing problem, sales problem or both?

Evidence:

10. AUDIT SCORECARD

Score 1–5:

Offer:

Tracking:

Campaign structure:

Audience:

Creative:

Copy:

Landing page/form:

Lead quality:

Sales follow-up:

Measurement:

Total / 50:

40–50: strong foundation; optimize bottlenecks.

30–39: workable but meaningful gaps exist.

20–29: multiple system-level issues.

Below 20: rebuild priorities before aggressive scaling.

11. PRIORITY ACTION PLAN

P0 – Critical: Tracking, broken conversion path, account restriction, wrong destination.

P1 – High impact: Offer, creative, lead quality, landing page, sales follow-up.

P2 – Optimization: Audience structure, budget allocation, testing cadence.

P3 – Nice to improve: Naming, reporting polish, minor format changes.

Top 5 actions:

1.
2.
3.
4.
5.

12. 30-DAY TEST PLAN

What will remain unchanged?

What will we change?

What hypothesis are we testing?

What metric will determine success?

When will we review?

What business-side feedback is required?

GoUp Agency Practice Note

Do not “optimize” an account by making many changes at once. A good audit identifies the biggest bottleneck and creates a controlled plan to learn.

6. Client Onboarding Checklist

Client Onboarding Checklist

PURPOSE

Use this checklist when onboarding a Meta Ads client. Good onboarding protects delivery quality, reduces delays and makes responsibilities clear before campaigns begin.

ONBOARDING RULE

Do not promise a launch date until access, assets, offer, tracking and client-side responsibilities are confirmed.

PHASE 1: BUSINESS DISCOVERY

- Legal/business name confirmed.
- Brand name and website confirmed.
- Primary contact person confirmed.
- Billing/contact details received.
- Products/services to promote confirmed.
- Main locations confirmed.
- Target audience discussed.
- Primary business goal agreed.
- Monthly marketing budget agreed.
- Pricing / offer / promotion confirmed.
- Previous marketing experience discussed.
- Main competitors identified.
- Brand guidelines and restrictions collected.

Discovery questions:

What are your top 3 products/services?

Who is your most profitable customer?

What problem does the customer come to you to solve?

Why do customers choose you?

What is the average sale/deal value?

What is your current monthly lead/sales volume?

What is your sales capacity?

What makes a lead qualified?

What are the most common objections?

What result would make this engagement successful?

PHASE 2: ACCESS COLLECTION

- Meta Business Portfolio access.
- Ad account access.
- Facebook Page access.
- Instagram account access.
- Pixel/Dataset access.
- Website/CMS access where required.
- Google Tag Manager / Analytics access where required.
- CRM access or lead integration support where required.
- Domain/DNS support contact where required.
- Product catalogue access for ecommerce where required.

SECURITY PRACTICE

Prefer proper partner/user permissions. Do not ask clients to casually share personal passwords.

PHASE 3: ASSET COLLECTION

- Logo files.
- Brand colours/fonts.
- Product/service photos.
- Video footage.
- Testimonials/reviews with permission.
- Existing creatives.
- Existing ad copy.

- Offer/pricing document.
- Brochure/catalogue if relevant.
- Case studies/results that may legally be used.
- Mandatory disclaimers.
- Location/contact details.
- Previous campaign reports if available.

PHASE 4: TRACKING & LEAD DELIVERY

- Pixel/Dataset setup reviewed.
- Required events identified.
- Conversions API requirement assessed.
- Test events completed.
- Meta Instant Form destination tested if used.
- CRM integration tested.
- WhatsApp/call routing tested.
- Lead notification recipients confirmed.
- Lead fields mapped correctly.
- UTM convention agreed where needed.
- Reporting source of truth agreed.

PHASE 5: OFFER & FUNNEL

- Primary offer written in one sentence.
- CTA confirmed.
- Landing page/form/WhatsApp path selected.
- Qualification questions approved.
- Thank-you/confirmation process approved.
- Sales handoff owner confirmed.
- Follow-up process confirmed.
- Lead-quality definition documented.
- Customer objections collected for creative strategy.

FUNNEL SNAPSHOT

Ad →

Destination ➜

Qualification ➜

Salesperson/CRM ➜

Follow-up ➜

Final conversion ➜

PHASE 6: CREATIVE & CONTENT

- Creative strategy approved.
- Initial angles selected.
- Scripts/copy approved.
- Shoot responsibility confirmed.
- Editing responsibility confirmed.
- Asset delivery deadline confirmed.
- Revision/approval process confirmed.
- Approval turnaround expectation set.
- Compliance-sensitive claims flagged.

Initial creative angles:

1.
2.
3.
4.

PHASE 7: SALES TEAM ALIGNMENT

- Sales team knows campaign start date.
- Sales script aligns with ad promise.
- Expected response time agreed.
- CRM stages are defined.
- Qualification status is defined.
- Follow-up cadence is ready.
- Lost reasons are tracked.

- Weekly lead-quality feedback owner is assigned.

PHASE 8: CAMPAIGN & REPORTING EXPECTATIONS

- Campaign objective agreed.
- Starting budget confirmed.
- Testing period explained.
- Client understands results can fluctuate.
- KPI hierarchy agreed.
- Reporting frequency agreed.
- Review meeting frequency agreed if applicable.
- Communication channel agreed.
- Escalation/contact process agreed.

KPI HIERARCHY EXAMPLE

Primary business KPI: Sales / Admissions / Appointments / Qualified Leads

Secondary: CPL / CPA / Conversion Rate

Diagnostic: CPM / CTR / CPC / Frequency

PHASE 9: PRE-LAUNCH SIGN-OFF

- All critical access received.
- Tracking tested.
- Offer approved.
- Landing/form flow tested.
- Creatives approved.
- Budget approved.
- Lead delivery tested.
- Sales team ready.
- Launch schedule confirmed.

CLIENT RESPONSIBILITIES

Define before launch:

Communication:

Tracking scope:

[GoUp Agency Practice Note]

A strong onboarding process prevents marketing problems from becoming “Meta Ads problems.” Access, offer, sales capacity and accountability must be clear before spending starts.

7.Campaign scaling SOP

Campaign Scaling SOP

Purpose

This SOP helps performance marketers decide:

- When a Meta Ads campaign is ready to scale
- How much budget can be increased
- When to use vertical or horizontal scaling
- How scaling differs across business models
- What metrics should be checked before increasing spend
- When to hold, reduce or stop scaling

Scaling does **not** simply mean increasing the budget.

The real objective is:

Increase spend while maintaining an acceptable business outcome.

A campaign should not be scaled only because CPC, CPL or CPA looks good inside Ads Manager.

1. What Does Campaign Scaling Mean?

There are four main ways to scale a campaign.

1.1 Vertical Scaling

Increase the budget of an existing campaign or ad set that is already performing well.

Example:

₹1,000/day
➜ ₹1,200/day

➜ ₹1,500/day
➜ ₹1,800/day

The purpose is to give an already working system more budget.

1.2 Horizontal Scaling

Expand the campaign without simply increasing the same budget.

Examples:

- New creative angles
- New audiences
- Broader audience
- New geographical areas
- New languages
- New offers
- New products
- New campaign approaches

Horizontal scaling is especially useful when simply increasing the budget starts reducing efficiency.

1.3 Creative Scaling

Develop more strong creative concepts so the account is not dependent on one winning advertisement.

Examples:

- Problem angle
- Educational angle
- Founder/expert video
- Testimonial

- Case study
- Demonstration
- Comparison
- Objection-handling creative
- Offer-focused creative

A campaign cannot scale sustainably if one creative is responsible for most of the performance.

1.4 Funnel Scaling

Improve what happens after the advertisement.

Examples:

Ad
➜ Landing Page
➜ Lead
➜ Qualification
➜ Sales Call
➜ Follow-up
➜ Sale

Sometimes the best way to scale is not increasing ad spend.

Improving the landing page, qualification process or sales conversion rate may produce more revenue from the **same budget**.

2. The Most Important Scaling Rule

Never Scale Only Because CPL or CPA Is Low

Example:

Campaign A

CPL: ₹100
100 leads
10 qualified leads
1 sale

Campaign B

CPL: ₹250
50 leads
25 qualified leads
6 sales

Campaign A looks cheaper inside Meta Ads Manager.

But Campaign B may generate significantly better business results.

Therefore, always evaluate two groups of metrics.

Meta / Platform Metrics

- Spend
- CPM
- CTR
- CPC
- CPL
- CPA
- Frequency
- Conversion rate
- ROAS where applicable

Business Metrics

- Contact rate
- Qualified lead rate
- Appointment rate
- Site-visit rate

- Close rate
- Customer acquisition cost
- Revenue
- Profitability
- Lead quality
- Sales-team feedback

Agency Principle

Cheap leads are not necessarily good leads.

The goal is not the cheapest CPL.

The goal is an acceptable **cost to acquire a valuable customer**.

3. Scaling Readiness Checklist

Before increasing the budget, confirm these areas.

3.1 Campaign Performance

Check:

- Campaign has enough data to understand its performance
- CPL/CPA is within an acceptable range
- Performance is reasonably stable
- The result is not based only on one unusually good day
- Conversion quality is acceptable

3.2 Tracking

Check:

- Pixel/Dataset is working where applicable
- Required conversion events are firing

- CRM/lead data is being received correctly
- Website or form tracking is working
- No obvious duplicate events
- Business data roughly matches campaign data

Do not aggressively scale when tracking is unreliable.

3.3 Creative

Check:

- At least one creative concept is performing
- Additional creatives are available
- New creative production is planned
- Winning ad is not showing obvious fatigue

3.4 Funnel

Check:

- Landing page works properly
- Lead form works
- WhatsApp/call destination works
- Payment/booking process works
- Lead notifications work
- Follow-up process is ready

3.5 Business Capacity

Check:

- Sales team can handle additional leads
- Inventory is available
- Appointment capacity is available
- Delivery capacity is sufficient
- Customer-support capacity exists

- Business has enough cash flow for higher ad spend

Important

Never scale marketing faster than the business can handle the demand.

4. Learning Phase & Budget Changes

Meta's delivery system needs enough conversion data and time to understand who is more likely to complete the selected objective.

Large or frequent campaign changes may disturb delivery and make performance harder to evaluate.

Therefore:

- Avoid unnecessary daily changes
- Do not change many important variables at once
- Give campaigns enough time to collect useful data
- Use controlled budget increases

About the “20% Rule”

You may hear marketers say:

> Never increase budget by more than 20%.

Treat this as an **operational guideline**, not a guaranteed Meta rule.

There is no single percentage that works for every campaign.

At GoUp, we prefer gradual increases because they make performance easier to monitor.

5. GoUp Budget Scaling Framework

These ranges are practical agency guidelines, not fixed Meta rules.

Actual scaling depends on:

- Business economics
- Campaign history
- Conversion volume
- Audience size
- Market
- Creative
- Sales process
- Budget
- Seasonality

Level 1: ₹300 – ₹1,000 Per Day

Suitable for:

- Local businesses
- Small education brands
- Freelancers
- Local services
- Small validation campaigns

Recommended Approach

Keep the campaign structure simple.

Do not divide a ₹500/day budget into too many ad sets.

If performance is stable and quality is good, consider increases of approximately:

10%–25% at a time

Example:

₹500
→ ₹600
→ ₹750
→ ₹900

Then review again.

At this budget, concentration is usually more important than creating many campaigns.

6. Level 2: ₹1,000 – ₹3,000 Per Day

Suitable for:

- Growing local businesses
- Education
- Real estate
- Healthcare lead generation
- Small D2C brands
- Established service businesses

If performance and business quality remain acceptable:

Consider approximately:

15%–25% controlled increases

Example:

₹1,500
→ ₹1,800
→ ₹2,200
→ ₹2,600

Before every major increase, review:

- Last few days' trend
- 7-day performance
- Lead/purchase quality
- Sales feedback
- Creative performance

7. Level 3: ₹3,000 – ₹10,000 Per Day

At this level, scaling should become a system.

Do not depend only on budget increases.

Focus on:

- Proven campaigns
- Continuous creative testing
- Retargeting where meaningful
- New audience/market testing
- Funnel improvement

Controlled budget increases may often fall around:

10%–20%

But the percentage itself is less important than what happens to business performance after the increase.

At this stage, track:

- CPL/CPA
- Cost per qualified lead
- CAC
- Revenue
- Creative performance
- Sales conversion

8. ₹10,000+ Per Day

At higher spend levels, scaling becomes portfolio management.

Think about:

- Which campaign deserves additional budget
- Which creative angle can absorb more spend
- Which product has better margins
- Which geography is performing better
- Which audience creates better customers
- Where the next ₹10,000 can produce the highest business value

Do not simply increase every performing campaign.

A useful internal structure can be:

Core Campaigns

Campaigns that already produce reliable results.

Testing

Creative, audience, offer and funnel experiments.

Expansion

New markets, geographies or customer segments.

There is no universal percentage allocation.

Set it according to the business and available data.

9. Vertical Scaling SOP

Use this when an existing campaign is already producing acceptable results.

Step 1: Record the Baseline

Before changing the budget, document:

Campaign:

Current Budget:

Spend:

Results:

CPL/CPA:

Qualified Lead Rate:

Sales:

Revenue:

CAC:

ROAS if relevant:

Winning Creative:

Frequency:

Sales-Team Feedback:

Step 2: Confirm the Reason

Example:

> Campaign has maintained acceptable qualified CPL and the sales team confirms good lead quality.

Do not scale simply because:

> CPL was cheap yesterday.

Step 3: Increase Budget

Use a controlled increase appropriate for the campaign.

Step 4: Avoid Other Major Changes

Do not simultaneously change:

- Budget
- Audience
- Campaign objective
- Optimization event
- Creative strategy
- Landing page
- Offer

If everything changes together, you will not know what caused the next result.

Step 5: Monitor

Review:

- Spending

- Results
- CPL/CPA
- Conversion rate
- Lead quality
- Sales
- Revenue
- Creative distribution
- CPM/CTR/CPC changes

Step 6: Make the Next Decision

Scale

Performance remains commercially acceptable.

Hold

Performance is acceptable but needs more data.

Reduce

Efficiency dropped beyond the business's acceptable range.

Diagnose

The issue may be creative, funnel, sales, tracking or offer rather than budget.

10. Horizontal Scaling SOP

Use horizontal scaling when:

- Budget increases reduce efficiency
- Audience is becoming limited

- Creative fatigue appears
- New markets are available
- New customer segments exist
- New creative opportunities exist

Ways to Horizontally Scale

New Creative Angles

Problem
Case study
Testimonial
Founder
Comparison
Demonstration
Objection
Educational
Offer

New Geography

Example:

Theni
➜ Madurai
➜ Tamil Nadu

Only expand if the business can actually serve those locations.

Broader Audience

Do not create unnecessary restrictions without evidence.

Sometimes broader targeting gives Meta more opportunities to find customers.

New Offers

Example:

Free consultation
Demo
Trial
Specific package
Limited genuine promotion

11. Scaling by Business Type

Local Service Businesses

Examples:

- Gym
- Salon
- Dental clinic
- Training institute
- Interior business
- Local services

Do not focus only on CPL.

Track:

Lead
➜ Contacted
➜ Appointment
➜ Customer

Primary Scaling Metric

Cost per customer or appointment.

Scale through:

Budget
➜ Creative
➜ Geography

Do not expand to areas the business cannot serve properly.

Education Businesses

Track:

Lead
➜ Contacted
➜ Qualified
➜ Counseling
➜ Admission

Primary Metric

Cost per admission.

Before scaling, confirm the admissions/sales team can contact all leads properly.

Useful creative angles:

- Career outcome
- Student story
- Curriculum
- Practical learning
- Instructor/expert
- Objection handling
- Case study

Real Estate

Track:

Lead
➜ Contacted
➜ Qualified
➜ Site Visit
➜ Booking

Primary Metrics

- Qualified CPL
- Cost per site visit
- Cost per booking

A ₹400 lead that visits the property may be better than a ₹100 lead that never responds.

Useful scaling methods:

- Property walkthrough
- Location benefits
- Amenities
- Price/EMI information where accurate
- Construction progress
- Buyer testimonial
- Builder/founder trust
- Investor angle
- End-user angle

High-Ticket B2B

Examples:

- SaaS

- Software services
- Consulting
- High-ticket agency services
- Industrial solutions

Track:

Lead
➜ Qualified Opportunity
➜ Meeting
➜ Proposal
➜ Sale

Primary Metric

Cost per qualified opportunity and CAC.

These businesses usually have lower conversion volume and longer sales cycles.

Do not judge them based only on yesterday's CPL.

Review longer periods when appropriate.

Ecommerce

Track:

- Purchases
- CPA
- AOV
- ROAS
- CAC
- Contribution margin

Before scaling, calculate costs such as:

- Product cost

- Shipping
- Discounts
- Payment fees
- Returns
- COD/RTO where applicable
- Advertising cost

High Meta ROAS does not automatically equal high profit.

WhatsApp / Messaging Campaigns

Do not scale using only:

Cost per messaging conversation.

Track:

Conversation
➔ Relevant Enquiry
➔ Qualified Prospect
➔ Sale

Before scaling, review actual conversation quality.

Check whether:

- People understand the offer
- Correct customers are messaging
- Sales team responds quickly
- Price expectations match
- Location is relevant

12. Creative Scaling SOP

Creative is one of the most important scaling levers.

Use this sequence.

Stage 1: Test Different Messages

Test:

- Problems
- Desires
- Offers
- Proof
- Objections

Stage 2: Test Hooks

Once an angle works, test different openings.

Stage 3: Test Formats

Example:

One proven idea can become:

- Founder video
- Voice-over
- UGC-style
- Static image
- Carousel
- Screen recording
- Product demonstration

Stage 4: Build Variations

After the underlying idea is proven, create more iterations.

Avoid

Creating ten different-looking ads that communicate exactly the same message.

That is visual variation, not strong creative testing.

13. Creative Fatigue

Possible signs:

- CTR starts declining
- CPC increases
- CPA/CPL increases
- Conversion volume decreases
- Frequency increases
- One ad receives most of the spend
- Watch performance falls

Do not use one frequency number as a universal rule.

Frequency behaves differently for:

- Large audiences
- Small local audiences
- Retargeting
- High-ticket offers
- Frequently purchased products

Evaluate frequency together with overall performance.

14. Campaign Budget vs Ad Set Budget

Campaign Budget

Useful when Meta can dynamically distribute spend among multiple ad sets.

Suitable when:

- Multiple valid audiences exist
- You want flexible budget allocation
- Campaign has enough performance data

Ad Set Budget

Useful when you need controlled spending.

Examples:

- Geographic test
- Audience test
- Offer test
- Structured experiment

Neither method is automatically better.

Use the structure that matches the purpose of the campaign.

15. Slow Scaling vs Aggressive Scaling

Slow Scaling

Prefer when:

- Account is new
- Budget is limited
- Conversion data is limited

- Business is risk-sensitive
- Sales capacity is limited

Process:

Increase
➜ Observe
➜ Validate
➜ Increase again

Faster Scaling

May be possible when:

- Offer is already validated
- Conversion volume is high
- Tracking is reliable
- Creative pipeline is strong
- Economics are understood
- Business can handle higher volume
- Cash flow can handle performance fluctuations

Even then, aggressive scaling should not mean random budget doubling.

16. Understand Diminishing Efficiency

Suppose:

₹2,000/day generates 4 purchases at ₹500 CPA.

Increasing to ₹4,000/day does **not** guarantee:

8 purchases at ₹500 CPA.

Meta must find additional customers.

Those additional conversions may cost more.

This is normal in advertising.

The goal is not always:

Maintain exactly the same CPA forever.

The better question is:

> Is the additional spend still creating acceptable profit or customer value?

17. Marginal Performance

Example:

At ₹10,000 spend:

100 leads

CPL = ₹100

After increasing spend to ₹15,000:

125 total leads

Blended CPL = ₹120

But the extra ₹5,000 created only:

25 additional leads.

Therefore:

₹5,000 ÷ 25 = ₹200

The **additional leads cost approximately ₹200 each**.

This is called thinking about marginal performance.

As budgets increase, mature marketers should monitor the economics of the **next amount of spend**, not only the overall average.

18. Scaling Guardrails

Before scaling, define acceptable ranges.

Example:

Target CPL: ₹300

Acceptable range during scaling: ₹300–₹360

Maximum acceptable CAC: ₹X

Minimum qualified lead rate: 30%

Minimum close rate: X%

These numbers must come from the specific business.

Do not copy another company's benchmarks.

19. Review Windows

There is no single review period suitable for every business.

Short-Term Review

Useful for:

- Tracking failures
- Sudden spending issues
- Creative problems
- Website errors
- Major performance changes

3–7 Day Review

Useful for many normal lead-generation and ecommerce campaigns to understand recent direction.

14–30 Day Review

More important for:

- Real estate
- B2B
- High-ticket services
- Long sales cycles
- Lower-volume campaigns

A lead generated today may close several weeks later.

Therefore the correct review window depends on the customer's buying cycle.

20. Scaling Decision Framework

Before increasing spend, ask these questions in order.

1. Is tracking reliable?

No → Fix tracking.

Yes → Continue.

2. Are business results acceptable?

No → Diagnose.

Yes → Continue.

3. Is lead/purchase quality acceptable?

No → Fix quality first.

Yes → Continue.

4. Is the campaign reasonably stable?

No → Collect more data.

Yes → Continue.

5. Can the business handle more volume?

No → Fix operations first.

Yes → Continue.

6. Is the creative pipeline ready?

No → Develop more creative.

Yes → Continue.

7. What is the best scaling lever?

- Budget
- Creative
- Audience
- Geography
- Funnel
- Offer

Then make **one clear scaling decision**.

21. What Not to Do

Avoid:

- Scaling after one good day
- Increasing budget every few hours
- Making multiple major changes simultaneously
- Creating too many campaigns with small budgets
- Scaling only because CTR is high
- Scaling only because CPL is cheap
- Ignoring lead quality
- Ignoring the sales team
- Ignoring profitability
- Copying another brand's budget
- Constantly duplicating campaigns
- Constantly rebuilding campaigns
- Scaling weak creatives simply by adding more money

22. Agency Scaling Log

Every meaningful scaling action should be documented.

Campaign:

Date:

Current Budget:

New Budget:

Budget Change:

Previous Performance:

CPL / CPA:

Qualified Lead Rate:

CAC:

Revenue / ROAS:

Winning Creative:

Sales Feedback:

Reason for Scaling:

Hypothesis:

Review Date:

Result:

Learning:

Next Decision:

Scale / Hold / Reduce / Test

This helps marketers learn from campaigns instead of making random decisions.

23. Quick Industry Reference

Local Service

Primary metric:

Cost per appointment/customer

Main scaling levers:

Creative → Budget → Geography

Education

Primary metric:

Cost per admission

Main scaling levers:

Creative → Budget → Audience

Real Estate

Primary metric:

Qualified CPL / Cost per Site Visit / Cost per Booking

Main scaling levers:

Creative → Lead Quality → Geography → Budget

B2B

Primary metric:

Cost per Qualified Opportunity / CAC

Main scaling levers:

Offer → Quality → Creative → Budget

Ecommerce

Primary metric:

CPA / CAC / Contribution / ROAS

Main scaling levers:

Creative → Budget → Product → Audience → Geography

WhatsApp

Primary metric:

Cost per Qualified Conversation / Sale

Main scaling levers:

Creative → Offer → Conversation Quality → Budget

24. GoUp Scaling Philosophy

Think in this sequence:

Tracking

↓

Business Economics

↓

Offer

↓

Creative

↓

Funnel

↓

Lead / Purchase Quality

↓

Campaign Stability

↓

Business Capacity

↓

Scale

↓

Measure Incremental Performance

↓

Scale / Hold / Reduce

The beginner asks:

> How much should I increase my budget?

The performance marketer asks:

> What evidence tells me this campaign deserves more budget?

That is the mindset behind this SOP.

Important Note

This SOP is created based on **GoUp's practical campaign experience, agency learnings, commonly used performance-marketing practices and available Meta advertising guidance**.

It should **not be treated as a fixed formula or guaranteed rule for every Meta Ads account.**

Campaign performance and scaling decisions can differ significantly depending on factors such as:

- Industry
- Business model
- Product or service
- Offer
- Audience
- Geography
- Competition
- Seasonality
- Advertising budget
- Creative quality
- Funnel
- Website
- Sales process
- Lead quality
- Conversion volume
- Account history
- Tracking accuracy
- Meta platform updates
- Auction conditions and market changes

Meta's advertising platform, delivery system, features and recommended practices can also change over time.

Therefore, the percentages, budget ranges and scaling approaches mentioned in this SOP should be used as **practical reference points**, not universal rules.

Always evaluate the **latest campaign data, current Meta platform behaviour and the economics of the specific business before making scaling decisions.**

Use the framework. Understand the data. Make the decision based on the business.

8. AI Prompt Library

AI Prompt Library for Performance Marketers

PURPOSE

Use AI to accelerate research, thinking, scripting, copywriting, analysis, reporting and campaign decision-making.

AI should support a marketer's judgment, not replace marketing fundamentals, business understanding or real campaign data.

HOW TO USE THESE PROMPTS

Replace all [brackets] with real information.

Give AI enough business context before asking for recommendations.

Never paste confidential client/customer data unless you are authorised to do so.

Verify:

- Numbers
- Claims
- Meta policies
- Strategic recommendations
- Business assumptions

before using the output.

AI output should be treated as a **thinking assistant**, not an automatic final decision.

PROMPT 1: CUSTOMER RESEARCH

Act as a senior performance marketing strategist.

Business: [business]

Product/service: [product/service]

Location: [location]

Price/offer: [details]

Primary audience: [audience]

Business goal: [leads/sales/appointments/etc.]

Analyse the likely customer:

1. Main problems
2. Desired outcomes
3. Buying triggers
4. Top objections
5. Existing alternatives
6. Trust signals they need
7. Questions they ask before buying
8. Language/phrases they may naturally use

Do not invent market statistics.

Separate assumptions from known facts.

Finally, give me 5 customer insights I should validate using real sales/customer data.

PROMPT 2: CREATIVE ANGLE GENERATOR

I need Meta ad creative angles for:

Offer: [offer]

Audience: [audience]

Customer problem: [problem]

Desired outcome: [outcome]

Proof available: [proof]

Main objections: [objections]

Brand tone: [tone]

Generate 12 genuinely different creative angles.

Do not give multiple versions of the same idea.

Use categories such as:

- Problem
- Outcome
- Educational
- Mistake
- Comparison
- Case study
- Proof
- Objection
- Demonstration
- Founder/expert
- Behind-the-scenes
- Offer

For each angle give:

- Core idea
- Why it may work
- One hook
- Best format
- CTA

Avoid exaggerated or unsupported claims.

PROMPT 3: HOOK GENERATOR

Create 20 Meta/Reels hooks for:

Audience: [audience]

Topic/offer: [topic]

Main problem: [problem]

Desired outcome: [outcome]

Use a mix of:

- Audience call-out
- Problem
- Curiosity
- Contrarian
- Mistake
- Question
- Proof
- Comparison
- Outcome

Keep every hook short and conversational.

The hook should earn attention in the first 2–3 seconds.

Do not use fake urgency, fake numbers or clickbait that the rest of the ad cannot support.

PROMPT 4: VIDEO AD SCRIPT

Write a [30/45/60]-second Meta video ad script.

Business:

Offer:

Audience:

Problem:

Desired outcome:

Main insight:

Proof available:

CTA:

Tone:

Language: [English/Tamil/Tanglish/etc.]

Use this structure:

Hook

Problem/context

Key insight

Solution

Proof

Offer

CTA

Make it sound spoken, not like an article.

Give separately:

- Spoken script
- On-screen text
- B-roll/visual suggestions

PROMPT 5: AD COPY VARIATIONS

Create 5 Meta primary-text variations and 10 headlines.

Offer:

Audience:

Awareness level:

Problem/desire:

Creative message:

Proof:

CTA:

Create variations using:

1. Direct
2. Problem-solution
3. Educational
4. Case-study/proof
5. Objection handling

Keep the core offer consistent.

Do not invent testimonials, results, guarantees or urgency.

PROMPT 6: FUNNEL REVIEW

Act as a senior performance marketer auditing this funnel.

Traffic source:

Audience:

Ad promise:

Creative:

Landing page/form:

Offer:

Qualification:

Lead destination:

Response time:

Sales process:

Follow-up:

Current metrics:

Analyse:

Attention → Click → Conversion → Contact → Qualification → Appointment → Sale

Identify:

1. Three most likely bottlenecks
2. Evidence supporting each hypothesis
3. Additional data required
4. One test for each bottleneck
5. Metric that would validate the test

Do not automatically blame targeting.

PROMPT 7: CAMPAIGN DIAGNOSIS

Analyse this Meta campaign without jumping to conclusions.

Business objective:

Optimization event:

Spend:

CPM:

CTR:

CPC:

Leads/Purchases:

CPL/CPA:

Landing-page conversion rate:

Lead contact rate:

Qualified rate:

Appointment rate:

Close rate:

Revenue:

Frequency:

Creative information:

Recent campaign changes:

First separate:

Platform Metrics

from

Business Metrics

Then tell me:

1. What looks healthy

2. What looks weak
3. What cannot yet be concluded
4. Top 3 likely hypotheses
5. One controlled test for each hypothesis
6. What I should NOT change yet

Do not recommend scaling only because CPL or CPA is low.

PROMPT 8: CREATIVE PERFORMANCE ANALYSIS

I tested these creatives:

[Paste creative name, angle, hook, format, spend, CTR, CPC, CPL/CPA, qualified rate/sales quality and watch metrics where available]

Analyse results by:

- Angle
- Hook
- Format
- Offer
- Audience

Tell me:

1. What appears to be working
2. What appears weak
3. What cannot be concluded because of insufficient data
4. What customer insight we may have learned
5. Five creative tests to run next

Do not treat small samples as certainty.

PROMPT 9: LEAD QUALITY ANALYSIS

Meta generated:

Leads: [number]

CPL: [amount]

Sales results:

Contacted:

Qualified:

Appointments:

Sales:

Lost reasons:

Average response time:

Audience:

Creative promise:

Form questions:

Calculate where possible:

- Contact rate
- Qualified rate
- Appointment rate
- Close rate
- Cost per qualified lead
- Cost per appointment
- CAC

Then explain whether the main issue appears to be:

- Acquisition
- Qualification
- Sales follow-up

- Offer
- Or insufficient data

Give specific next actions.

PROMPT 10: CAMPAIGN AUDIT ASSISTANT

I am auditing an existing Meta Ads account.

Business:

Offer:

Goal:

Historical campaigns:

Tracking setup:

Audiences:

Creatives:

Landing page/form:

Sales process:

Metrics:

Create an audit under:

- Business/Offer
- Tracking
- Campaign Structure
- Audience
- Creative
- Copy
- Landing Page/Form

- Lead Quality
- Sales Process
- Measurement

For each issue classify:

Critical / High Impact / Optimization / Nice to Improve

Then give the top 5 priorities.

Do not recommend rebuilding the entire account unless the evidence supports it.

PROMPT 11: CLIENT DISCOVERY QUESTIONS

Create a discovery questionnaire for a new Meta Ads client in [industry].

We need to understand:

- Business model
- Offer
- Target customer
- Location
- Margins/deal value
- Sales cycle
- Lead quality
- Sales capacity
- Previous advertising
- Creatives
- Tracking
- CRM
- Competitors
- Growth goal

Group questions into:

Business

Customer

Offer

Sales

Marketing

Tracking

Operations

Only include questions that materially affect campaign strategy.

PROMPT 12: LANDING PAGE MESSAGE REVIEW

Review this landing page against the Meta ad promise.

Ad audience:

Ad message:

Offer:

CTA:

Landing-page copy:

Form/checkout fields:

Check:

- Message match
- Headline clarity
- Offer clarity
- Trust
- Proof
- Objection handling
- CTA visibility

- Mobile-first clarity
- Unnecessary friction
- Qualification
- Ad-to-page consistency

Recommend improvements in priority order.

Do not invent proof or claims.

PROMPT 13: REPORTING INSIGHT WRITER

Turn this campaign data into a client-friendly performance summary.

Business goal:

Period:

Spend:

Results:

CPL/CPA:

CTR:

CPC:

CPM:

Qualified leads/sales:

Revenue if available:

Changes made:

Creative learnings:

Sales feedback:

Next actions:

Write:

1. Executive Summary
2. What Happened
3. Why We Think It Happened
4. Business-Side Quality
5. Actions Already Taken
6. Next Tests

Do not present a hypothesis as a fact.

Avoid vanity-metric reporting.

PROMPT 14: SALES FEEDBACK → MARKETING ACTION

Sales team feedback:

[Paste anonymised feedback]

Campaign:

Audience:

Creative:

Offer:

Lead form:

Metrics:

Organise the feedback into:

- Lead intent
- Eligibility

- Budget
- Location
- Need
- Contact issues
- Sales-process issues
- Other

Then separate:

Problems marketing can influence

and

Problems sales/operations must fix

Recommend tests only for marketing-controlled issues.

PROMPT 15: NEXT TEST PLANNER

Current campaign:

What has been tested:

Current winner:

Current bottleneck:

Available budget:

Business KPI:

Creative capacity:

Build a 2-week testing plan.

For each test include:

- Hypothesis
- Main variable

- Asset required
- Budget approach
- Platform metric
- Business-quality metric
- Decision rule

Avoid testing several major variables simultaneously.

PROMPT 16: AI COPY QUALITY CONTROL

Review this AI-generated ad copy:

[Paste copy]

Check for:

- Generic language
- Unsupported claims
- Fake urgency
- Overpromising
- Unclear audience
- Weak offer
- Weak CTA
- Policy-sensitive wording
- Awareness-level mismatch
- Unnatural phrasing

Rewrite only where necessary.

Explain the strategic reason behind each major change.

PROMPT 17: COMPETITOR MESSAGE ANALYSIS

Here are competitor ad/page messages I manually collected:

[Paste public competitor messages]

Analyse:

- Positioning
- Offers
- Proof
- Objections
- Creative angles
- Common claims
- Overused messaging
- Customer concerns competitors are ignoring

Then suggest 5 differentiated messages we could test.

Do not assume competitor performance simply because an ad exists.

PROMPT 18: CAMPAIGN LEARNING DOCUMENT

Convert these campaign notes into a reusable agency learning document.

Business context:

Hypothesis:

Setup:

Creative:

Audience:

Budget:

Results:

Sales quality:

Changes:

Final outcome:

What surprised us:

Output:

1. Situation
2. Hypothesis
3. Test
4. Result
5. Business Impact
6. Learning
7. What We Would Do Next Time

This should document campaign learning, not create promotional marketing copy.

PROMPT 19: CLIENT UPDATE MESSAGE

Write a concise professional client update using only these facts:

[Paste campaign facts/actions]

Include:

- What changed
- Current performance
- Any concern
- What we are doing next
- What we need from the client

Keep it simple and business-focused.

Do not overpromise.

Avoid unnecessary technical jargon.

PROMPT 20: PERFORMANCE MARKETER THINKING PARTNER

Act as a critical senior performance marketer.

Do not automatically agree with my assumption.

Situation:

[Explain situation]

First identify:

- Missing data
- Known facts
- Assumptions
- Alternative explanations

Then recommend the smallest useful test before making major changes.

Consider:

- Creative
- Offer
- Funnel
- Tracking
- Audience
- Sales process
- Business economics

Do not focus only on Ads Manager.

CAMPAIGN SCALING PROMPTS

PROMPT 21: CAMPAIGN SCALING READINESS CHECK

Act as a senior Meta Ads strategist.

I want to know whether this campaign is ready to scale.

Business:

Industry:

Campaign objective:

Daily budget:

Spend:

How long campaign has been running:

CPL/CPA:

CTR:

CPM:

Frequency:

Conversions:

Qualified lead rate:

Sales:

Revenue:

CAC:

ROAS if relevant:

Creative performance:

Sales feedback:

Recent changes:

Business capacity:

Analyse whether the campaign should currently be:

Scale / Hold / Reduce / Diagnose

Before recommending scaling, check:

1. Tracking reliability
2. Conversion volume
3. Campaign stability
4. Lead/purchase quality
5. Business economics
6. Creative health
7. Funnel performance
8. Sales capacity
9. Operational capacity

If scaling is recommended, explain:

- Why
- Which scaling method is most appropriate
- Budget / creative / audience / geography / funnel
- Main risk
- What metric should be monitored after scaling

Do not recommend scaling only because CPL, CPA or ROAS looks good.

PROMPT 22: BUDGET SCALING PLAN

Create a controlled Meta Ads budget scaling plan.

Industry:

Business model:

Current daily budget:

Monthly budget limit:

Campaign objective:

Current CPL/CPA:

Target CPL/CPA:

Qualified lead rate:

CAC:

Revenue:

ROAS:

Current conversion volume:

Campaign stability:

Creative capacity:

Sales capacity:

Using the information above:

1. Recommend whether the campaign should be scaled now
2. Suggest a controlled budget progression
3. Explain the reason for each increase
4. Define what should trigger a HOLD
5. Define what should trigger a REDUCE
6. Define what should trigger another SCALE
7. Identify business-side metrics that must be monitored

Treat any percentage increase as a practical guideline, not a universal Meta rule.

Do not assume that doubling budget will double conversions.

PROMPT 23: VERTICAL VS HORIZONTAL SCALING

Help me decide whether this Meta campaign should use vertical scaling, horizontal scaling or both.

Campaign:

Current budget:

Audience:

Geography:

Creative:

Offer:

Frequency:

CPL/CPA:

Qualified rate:

Sales:

Revenue:

Current bottleneck:

Available creative resources:

Possible new markets:

Analyse:

Vertical Scaling

Should we increase the existing campaign budget?

Why or why not?

Horizontal Scaling

Should we expand through:

- New creatives
- New angles
- New audience
- Broader audience
- New geography
- New offer
- New format
- New funnel

Then recommend:

1. Best scaling approach
2. First action
3. Second action
4. What should remain unchanged
5. Review window
6. Success metric
7. Main risk

Prioritise the smallest useful scaling move before making several large changes.

PROMPT 24: SCALING PERFORMANCE REVIEW

We scaled this Meta campaign.

Before scaling:

Budget:

Spend:

Results:

CPL/CPA:

Qualified rate:

Sales:

Revenue:

CAC/ROAS:

After scaling:

Budget:

Spend:

Results:

CPL/CPA:

Qualified rate:

Sales:

Revenue:

CAC/ROAS:

Creative changes:

Audience changes:

Other changes:

Analyse:

1. Did the additional spend generate meaningful additional business outcome?
2. Did efficiency improve, remain acceptable or deteriorate?

3. What happened to lead/purchase quality?
4. What changed in marginal performance?
5. Is there enough evidence to scale again?
6. Should we Scale / Hold / Reduce / Diagnose?
7. What should we avoid changing next?

Do not judge only using blended CPL or CPA.

Consider the business value generated by the additional spend.

FINAL AI CHECKLIST

Before using any AI recommendation, check:

- Did I provide enough business context?
- Did AI separate facts from assumptions?
- Did I provide both platform and business metrics?
- Did I verify numbers and claims?
- Did AI avoid inventing customer or campaign data?
- Does the recommendation match the actual business?
- Did I consider lead quality and sales feedback?
- Did I check current campaign conditions before scaling?
- Did I avoid treating AI recommendations as fixed Meta rules?
- Did a human marketer make the final decision?

GoUp Agency Practice Note

AI is valuable when it helps a marketer research faster, challenge assumptions, identify patterns and structure better decisions.

It becomes dangerous when it replaces real campaign data, customer understanding or human judgment.

For campaign scaling especially, AI should help answer:

“What does the available evidence suggest?”

—not—

“What budget increase guarantees better results?”

There is no universal scaling formula. Business model, market, creative, funnel, account history, conversion volume and Meta platform conditions can all change the correct decision.
