GoUp Performance Marketing Framework: Knowledge Blueprint (Phase 1)

Source: "GoUp Performance Marketer Toolkits – 8" (112 pages). Purpose: a reliable understanding of the source before any agent design.

Conventions used throughout

- **[S]** = stated in the source. Page refs are **PDF page numbers** (the PDF's own printed page numbers restart per toolkit, so they differ).
- **[I]** = my interpretation or synthesis. Treat as a proposal to confirm, not as GoUp's position.
- **[Calc]** = my arithmetic on the source's examples.
- Coverage note: I read the full text layer of all 112 pages. I did not visually inspect page layouts; the only images detected are a header banner per page. Diagrams (arrows, flows) survive as text.

1. What the document is

[S] Eight toolkits, each opening with a divider page. They are written for Meta (Facebook/Instagram) paid advertising, in an agency voice ("GoUp Agency Practice Note" closes most toolkits). Examples use ₹ and Indian contexts (Theni → Madurai → Tamil Nadu, Tamil/Tanglish scripts).

#	Toolkit	PDF pages	Form
1	Campaign Launch Checklist	2–5	Checklist + Go/No-Go
2	Creative Strategy Framework	7–13	Framework + templates + scoring
3	Ad Copy Frameworks	15–21	Copy formulas + quality check
4	Funnel Mapping Template	23–31	Template + diagnostic ladder
5	Client Campaign Audit Checklist	33–39	Checklist + scorecard + priority tiers
6	Client Onboarding Checklist	41–47	9-phase checklist
7	Campaign Scaling SOP	49–83	Longest SOP: rules, levels, decision tree, log
8	AI Prompt Library	85–112	24 prompts + final AI checklist

[I] Toolkits 1, 5, 6 are *gates and audits* (is it safe to proceed?). Toolkits 2, 3, 4 are *design frameworks* (what to build). Toolkit 7 is the *growth decision engine*. Toolkit 8 is *the AI-use contract* and the closest existing analogue to the agent we plan to build.

2. The core thesis

[S] A campaign is not an ad. It is a whole path from impression to business outcome, and it must be judged on business results, not Ads Manager metrics. Quotes in spirit:

- "Launch only when the complete path from impression to business outcome is ready" (p.2).
- "The goal is not the cheapest CPL. The goal is an acceptable cost to acquire a valuable customer" (p.53).
- Beginner asks "how much should I increase budget?"; the performance marketer asks "what evidence tells me this campaign deserves more budget?" (p.81).

Recurring principles (the "constitution")

ID	Principle	Where it appears [S]
P1	**Full-funnel ownership.** Performance lives before the click, after the click and after the lead.	2, 5, 23, 31, 33, 51

ID	Principle	Where it appears [S]
P2	**Business metrics outrank platform metrics.** Platform metrics are diagnostic.	5, 28, 45 (KPI hierarchy), 52–53
P3	**Gate before you act.** No launch, no launch date, no scaling until prerequisites are met.	2, 5, 41, 54, 75–76
P4	**Audit/diagnose before changing; change one thing at a time.**	33, 39, 55, 61, 77, 96, 101, 109
P5	**Message diversity beats visual variation.**	7, 11, 70
P6	**Never invent proof, numbers, urgency or guarantees.**	10, 17, 18, 88, 90, 98
P7	**No universal benchmarks.** Thresholds come from the specific business.	55–56, 70, 74, 82
P8	**Separate facts, assumptions and hypotheses; never present a hypothesis as fact.**	86, 99, 104, 111
P9	**Sales and operations are part of the system.** Capacity and lead-quality feedback gate marketing decisions.	3, 44, 54–55, 94, 100
P10	**Document learning.** Logs and learning documents are first-class outputs.	13, 78, 102–103
P11	**AI assists, a human decides.**	85, 111–112

[I] P1–P4 and P9 are the *structural* principles (they shape workflows). P5–P8 are *content-quality* principles (they shape what the agent may say). P10–P11 shape the *interaction contract*.

3. Toolkit-by-toolkit knowledge map

Toolkit 1: Campaign Launch Checklist (pp.2–5)

[S] Structure: eight sections: (1) Business & offer, (2) Funnel, (3) Tracking & technical, (4) Campaign structure, (5) Creative, (6) Copy & compliance, (7) Sales team, (8) Final pre-launch check. **[S] Decision rule (p.5):** GO = goal + offer + funnel + tracking + creative + sales process ready. NO-GO = any critical conversion-path or tracking issue unresolved. **[S] Specifics:** naming format `CLIENT | OBJECTIVE | OFFER | AUDIENCE | MONTH/YEAR` (p.3); minimum 3 creative angles, not mere visual variants (p.4); capture a launch baseline

(p.5); post-launch chain Spend → Clicks → Leads/Sales → Qualified → Appointment/Site Visit → Revenue (p.5). **[I]** Items are not labeled critical vs non-critical. The only definition of "critical" is implied: tracking and conversion path.

Toolkit 2: Creative Strategy Framework (pp.7–13)

[S] Model (p.7): Audience → Problem/Desire → Angle → Hook → Proof → Offer → CTA → Format. **[S] Components:**

- Audience definition prompts (p.7).
- 5 awareness levels: Unaware, Problem-, Solution-, Product-, Most-aware (p.8). Cold = problem/desire/education/proof; warm = direct offer/objection/conversion (p.8).
- Angle bank of 12 (pp.8–9).
- 8 hook types (p.9).
- Proof ladder: weak ("we are experts") → process → real screen/example → verifiable case study (p.10).
- Creative brief template (pp.10–11) and format guide of 7 formats (p.11).
- Testing matrix: angle × hook × format (p.11).
- Creative Review Score: 10 criteria, 1–5 each (p.12).
- Post-launch creative diagnosis (pp.12–13) and Creative Learning Log (p.13).

[S] Diagnosis mapping (pp.12–13):

Symptom	Likely cause
Low thumb-stop	Hook / visual opening
Good watch time, poor clicks	Offer/CTA weak
Good CTR, poor conversion	Landing page, form, offer or audience quality
Good CPL, poor qualified leads	Creative attracting wrong intent
High frequency + falling response	Possible creative fatigue

Toolkit 3: Ad Copy Frameworks (pp.15–21)

[S] Basic flow: Hook → Problem/Desire → Insight → Solution → Proof → Offer → CTA (p.15). Seven frameworks with "best for" tags: Problem→Consequence→Solution (lead gen, local, education, B2B); Outcome→Mechanism→Proof→CTA; Mistake→Reframe→Action (educational/expert); Case Study (warm, B2B, agency); Objection Handling; PAS (pain-aware); AIDA (general, short LP copy) (pp.15–19). Also: 9-line primary text builder, headline formulas, description-line rule, CTA matching guide (pp.19–20), copy quality check and

adaptation template (pp.20–21). **[S] Review rule (p.21):** approve copy for communicating the right message to the right customer, not for sounding creative; copy cannot compensate for a weak offer.

Toolkit 4: Funnel Mapping Template (pp.23–31)

[S] Funnel view: Attention → Interest → Action → Qualification → Sales Conversation → Follow-up → Conversion → Retention/Referral (p.23). Twelve sections: business outcome, customer, offer, traffic, conversion point, handoff, qualification, sales process, follow-up (Day 0/1/3/7/14), measurement, funnel math, one-page map. **[S] Funnel diagnostic ladder (pp.28–29):**

Observation	Suspect
High CPM	Audience / auction / creative context
Low CTR	Creative / message relevance
Good CTR, low landing conversion	Page / offer / friction
Good lead volume, low contact rate	Bad data, slow response, weak intent
Good contact, low qualified rate	Targeting / message / offer mismatch
Good qualified, low appointments	Script / value / scheduling
Good appointments, low close rate	Sales, offer, price, trust or product-market fit

[S] Funnel math (p.29) is explicitly for planning assumptions, "not promises". Review questions (pp.30–31) include whether cost per qualified opportunity (not only CPL) can be calculated.

Toolkit 5: Client Campaign Audit Checklist (pp.33–39)

[S] Purpose: find where performance is lost across the whole acquisition system, not "mistakes" in Ads Manager (p.33). Twelve sections: business context, account/access health, tracking (with High/Medium/Low confidence), historical review (Keep/Investigate/Stop/Rebuild), audience, creative, copy & offer, landing page/form, sales & lead quality ("marketing problem, sales problem or both?"), scorecard, priority plan, 30-day test plan. **[S] Scorecard (p.38):** 10 areas × 1–5 = /50. Bands: 40–50 strong foundation; 30–39 workable with gaps; 20–29 multiple system-level issues; <20 rebuild priorities before aggressive scaling. **[S] Priority tiers (p.38):** P0 Critical (tracking, broken conversion path, account restriction, wrong destination); P1 High impact (offer, creative, lead quality, landing page, sales follow-up); P2 Optimization (audience structure, budget

allocation, testing cadence); P3 Nice-to-improve (naming, reporting polish, minor formats). **[S] Closing rule (p.39):** find the biggest bottleneck and run a controlled plan; do not change many things at once.

Toolkit 6: Client Onboarding Checklist (pp.41–47)

[S] Nine phases: business discovery, access, assets, tracking & lead delivery, offer & funnel, creative & content, sales alignment, campaign & reporting expectations, pre-launch sign-off. Rule: no launch date until access, assets, offer, tracking and client responsibilities are confirmed (p.41). Security rule: use partner/user permissions, never casual password sharing (p.42). KPI hierarchy example: primary = sales/admissions/appointments/qualified leads; secondary = CPL/CPA/conversion rate; diagnostic = CPM/CTR/CPC/frequency (p.45). Client and agency responsibility lists (pp.45–46) are headings with blanks.

Toolkit 7: Campaign Scaling SOP (pp.49–83)

The richest and most rule-like toolkit.

- **Four scaling types (pp.49–51):** vertical (more budget), horizontal (new angles/audiences/geo/offers), creative, funnel.
- **Cardinal rule (pp.51–53):** never scale only because CPL/CPA is low. Worked example: Campaign A (CPL ₹100, 100 leads, 10 qualified, 1 sale) vs Campaign B (CPL ₹250, 50 leads, 25 qualified, 6 sales). **[Calc]** If spend = leads × CPL, cost per qualified lead is ₹1,000 (A) vs ₹500 (B); cost per sale ≈ ₹10,000 (A) vs ≈ ₹2,083 (B).
- **Readiness checklist (pp.53–55):** performance, tracking, creative, funnel, business capacity (sales team, inventory, appointments, delivery, support, cash flow).
- **Learning phase and the "20% rule" (p.55):** called an operational guideline, not a Meta rule. GoUp prefers gradual increases.
- **Budget levels (pp.56–59):** L1 ₹300–1,000/day, 10–25% steps; L2 ₹1,000–3,000, 15–25%; L3 ₹3,000–10,000, 10–20%; L4 ₹10,000+, portfolio management (core / testing / expansion, "no universal percentage allocation").
- **Vertical SOP (pp.60–62):** record baseline → confirm reason → controlled increase → avoid other major changes → monitor → decide **Scale / Hold / Reduce / Diagnose**.
- **Horizontal SOP (pp.62–64):** use when efficiency drops, audience limited, fatigue, new markets/segments; expand geography only where the business can serve.
- **Business-type playbooks (pp.64–68, 78–80):** each has its own funnel chain, primary metric and lever order (see table below).
- **Creative scaling SOP (pp.68–70):** messages → hooks → formats → variations. Fatigue signs listed; frequency has no universal number (p.70).

- **Budget structure (pp.70–71):** campaign budget vs ad-set budget, "neither automatically better".
- **Slow vs faster scaling (pp.71–72); diminishing efficiency (pp.72–73); marginal performance (pp.73–74).** Worked example: ₹10,000 → 100 leads (CPL ₹100); ₹15,000 → 125 leads (blended ₹120) but marginal CPL = ₹5,000 ÷ 25 = ₹200.
- **Guardrails (p.74):** define acceptable ranges beforehand (example: target CPL ₹300, range ₹300–360, min qualified rate 30%; CAC and close-rate limits are placeholders).
- **Review windows (pp.74–75):** short-term for failures; 3–7 days for normal lead-gen/ecommerce; 14–30 days for real estate, B2B, high-ticket, long cycles.
- **Scaling Decision Framework (pp.75–76):** seven ordered questions (below).
- **What not to do (p.77), Scaling Log (pp.77–78), Philosophy sequence (pp.80–81), Important Note disclaimer (pp.82–83).**

Business-type quick reference [S] (pp.64–68, 78–80)

Type	Funnel to track	Primary metric	Lever order
Local service	Lead → Contacted → Appointment → Customer	Cost per appointment/customer	Creative → Budget → Geography
Education	Lead → Contacted → Qualified → Counseling → Admission	Cost per admission	Creative → Budget → Audience
Real estate	Lead → Contacted → Qualified → Site visit → Booking	Qualified CPL / cost per visit / per booking	Creative → Lead quality → Geography → Budget
High-ticket B2B	Lead → Qualified opp → Meeting → Proposal → Sale	Cost per qualified opportunity / CAC	Offer → Quality → Creative → Budget
Ecommerce	Purchases, AOV, ROAS, CAC, contribution margin	CPA / CAC / contribution / ROAS	Creative → Budget → Product → Audience → Geography

Type	Funnel to track	Primary metric	Lever order
WhatsApp/messaging	Conversation → Relevant enquiry → Qualified → Sale	Cost per qualified conversation / sale	Creative → Offer → Conversation quality → Budget

[S] The Scaling Decision Framework (pp.75–76), in order:

1. Tracking reliable? No → fix tracking.
2. Business results acceptable? No → diagnose.
3. Lead/purchase quality acceptable? No → fix quality first.
4. Campaign reasonably stable? No → collect more data.
5. Business can handle more volume? No → fix operations first.
6. Creative pipeline ready? No → develop more creative.
7. Choose best lever (budget / creative / audience / geography / funnel / offer), then make **one** clear scaling decision.

Toolkit 8: AI Prompt Library (pp.85–112)

[S] 24 prompts plus a 10-item Final AI Checklist (p.111). Usage rules (p.85): fill brackets with real info, give business context, don't paste unauthorised confidential data, verify numbers/claims/policies/strategy, treat output as a thinking assistant.

Prompt-to-toolkit map [I] (the source does not state these links):

Prompts	Function	Related toolkit
1 Customer research	Research	T2 §1, T4 §2
2–5 Angles, hooks, video script, copy variations	Generation	T2, T3
6 Funnel review; 7 Campaign diagnosis; 9 Lead quality	Diagnosis	T4, T5 §9
8 Creative performance analysis	Diagnosis	T2 §10
10 Audit assistant	Audit	T5
11 Discovery questions	Onboarding	T6 Phase 1
12 Landing page review; 16 AI copy QC	Review	T5 §8, T3
13 Reporting; 19 Client update; 14 Sales feedback → action	Communication / feedback	T6 Ph.8, T4 §7

Prompts	Function	Related toolkit
15 Next test planner; 18 Learning document	Planning / learning	T5 §12, T2, T7 log
17 Competitor analysis	Research	T1 §1
20 Thinking partner	Cross-cutting critic	all
21–24 Scaling readiness, budget plan, vertical vs horizontal, post-scale review	Scaling	T7

[S] Output-shape patterns reused across prompts: "what looks healthy / weak / cannot yet be concluded" (p.92–93); "top 3 hypotheses, one controlled test each, what NOT to change yet" (pp.91, 93); "facts vs assumptions" (pp.86, 104); "Scale / Hold / Reduce / Diagnose" (pp.106, 111); "do not recommend scaling only because CPL/CPA looks good" (pp.93, 106).

4. How the toolkits connect

[I] The source is implicitly a lifecycle, though it never draws it:

1. **Onboard** (T6) → collects access, offer, tracking, sales alignment and KPI hierarchy.
2. **Audit** (T5), if the account exists → produces scorecard, P0–P3 plan, 30-day test plan.
3. **Map the funnel** (T4) → defines outcome, qualification, handoff, funnel math.
4. **Design creative and copy** (T2, T3) → angles, briefs, review score, copy.
5. **Launch gate** (T1) → Go/No-Go, baseline captured.
6. **Run and diagnose** (T2 §10, T4 §10) → symptom-to-cause ladders.
7. **Scale** (T7) → readiness gate, one lever, log, review.
8. **Learn and communicate** (T2 log, T7 log, T8 prompts 13, 18, 19) → feeds back into step 3–4.

Explicit dependencies [S]: launch needs tracking + funnel + sales readiness (p.2–5); onboarding sign-off mirrors launch readiness (p.45); scaling readiness repeats tracking, creative, funnel and capacity checks (pp.53–55); audit's priority tiers put tracking and conversion path first (p.38); the scaling philosophy begins with tracking (p.80).

[I] Shared backbone across toolkits: (a) tracking trust, (b) offer clarity, (c) funnel/sales readiness, (d) creative diversity, (e) controlled change. These five recur in every gate or checklist.

5. Decision patterns

[I] The source uses seven distinct kinds of reasoning. Distinguishing them matters for how an agent should handle each:

1. **Hard gates** (stop if false): launch Go/No-Go (p.5), onboarding launch-date rule (p.41), scaling Q1–Q6 (pp.75–76), "do not scale when tracking is unreliable" (p.54).
2. **Symptom → suspect ladders:** creative diagnosis (pp.12–13), funnel diagnostic (pp.28–29), fatigue signs (p.70).
3. **Scored rubrics:** creative review /50 (p.12), audit scorecard /50 (p.38).
4. **Priority classification:** P0–P3 (p.38); Critical/High/Optimization/Nice (p.96).
5. **Outcome selectors:** Scale / Hold / Reduce / Diagnose (p.62); Keep / Investigate / Stop / Rebuild (p.35).
6. **Fit rules** ("best for"): copy frameworks (pp.15–19), CTA matching (pp.19–20), formats (p.11), awareness → creative approach (p.8), business type → metric (pp.64–68).
7. **Guideline ranges that the source itself disclaims:** budget % steps, review windows, frequency, 20% rule (pp.55, 56, 70, 82).

Hard numbers in the source and their status

Item	Value	Status
Min creative angles at launch	3	Firm checklist item (p.4)
Creative review bands	40–45 / 30–39 / <30	Firm rubric (p.12)
Audit bands	40–50 / 30–39 / 20–29 / <20	Firm rubric (p.38)
Budget levels and % steps	see §3, T7	"Practical guidelines, not fixed rules" (p.56)
Follow-up cadence	Day 0/1/3/7/14	Template headings only (p.27)
Review windows	3–7 d; 14–30 d	Guidance (p.75)
Guardrail example	₹300 target, ₹300–360, 30%	Illustrative (p.74)
Hook attention window	2–3 s (p.4, 88); "3–5 s" (p.9)	Guidance; slightly inconsistent

6. Ambiguities, inconsistencies and gaps

6A. Internal inconsistencies (found in the text)

1. **Creative score bands do not cover the maximum.** Ten criteria × 5 = 50, but bands are 40–45, 30–39, <30. Scores 46–50 are undefined (p.12). The audit scorecard (p.38) covers the full 0–50 range.
2. **Terminal decision label differs.** The vertical SOP and prompts use Scale / Hold / Reduce / **Diagnose** (pp.62, 106, 111); the Scaling Log uses Scale / Hold / Reduce / **Test** (p.78).
3. **Ordering of scaling checks differs across three places:** the Decision Framework (pp.75–76: tracking → results → quality → stability → capacity → creative → lever), the Philosophy sequence (pp.80–81: tracking → economics → offer → creative → funnel → quality → stability → capacity → scale), and Prompt 21's nine checks (p.106). Creative and economics sit at different points.
4. **Budget-step ranges are non-monotonic and overlap.** L1 10–25%, L2 15–25%, L3 10–20%. Boundaries (₹1,000, ₹3,000, ₹10,000) belong to two levels. Section numbering also collides with level names ("5. Framework" then "6. Level 2", "7. Level 3", "8. ₹10,000+", pp.56–59).
5. **Hook window:** "3–5 seconds" (p.9) vs "first 2–3 seconds" (pp.4, 88).
6. **Daily vs total spend unclear** in the marginal-performance example ("₹10,000 spend", p.73) while all other budget talk is per day.
7. **Drafting artifact:** p.5 ends with a stray note ("This structure is the one I'd keep consistently across all the toolkit documents"). It is not framework content and should be excluded from any knowledge base.

6B. Terms the source uses but never defines

- "Enough data", "reasonably stable", "acceptable range", "one unusually good day" (pp.53, 62). There is **no minimum conversions, spend or days** anywhere.
- "Critical" issues for No-Go (p.5); "learning phase" thresholds (p.55); "sufficient data" for creative tests (pp.93, 111).
- **Reduce** triggers ("efficiency dropped beyond the business's acceptable range", p.62) and **Hold** vs **Scale** boundary ("needs more data").
- Metric formulas: CPL, CAC, qualified lead rate, contact rate, "cost per qualified lead" (stage definitions are business-specific, defined in T4 §7).
- Tracking confidence High/Medium/Low (p.34) has no criteria and no downstream rule beyond "don't scale aggressively on unreliable tracking".

6C. Gaps relevant to an intelligence system

1. **No benchmarks** for CPM, CTR, CPL, frequency, conversion rate, close rate. This is deliberate (P7), but it means the agent cannot judge "good vs bad" without business-supplied targets.
2. **No experimentation statistics:** no sample size, significance or test duration rules, despite repeated "do not treat small samples as certainty".
3. **Ecommerce economics are thin:** costs to include are listed (p.67–68) but no break-even ROAS/CPA formula or margin-based target setting.
4. **Campaign structure and platform mechanics are checklist items only:** objective choice, buying type, optimisation events, attribution, placements, Advantage+ features, CAPI specifics. The checklist says "check" but not what correct looks like.
5. **Meta policy and compliance:** flagged repeatedly (pp.4, 85) but no rule content.
6. **Retention/referral** appears in the funnel view (p.23) with no template or metrics.
7. **No launch-to-first-review SOP:** what to do in days 1–14 after launch (learning-phase handling, when to first intervene) is not covered beyond principles.
8. **No reporting SOP** beyond Prompt 13 and the KPI hierarchy; **no creative-production workflow** beyond briefs.
9. **No lead-to-prompt for Toolkit 1:** the launch Go/No-Go has no corresponding prompt; onboarding has only Prompt 11.
10. **Single platform, single market style:** Meta only (other channels appear only as options on p.24); ₹ and India-specific geography/language.
11. **Time-sensitivity:** the source itself says platform behaviour changes (pp.82–83). Statements about learning phase, 20% rule and delivery are experience-based, not verified against current Meta documentation.
12. **Template blanks:** many sections (client/agency responsibilities, follow-up days, funnel math) are empty templates; they define *what to ask*, not *what answers are good*.

7. Thoughts on structuring this knowledge for an agent

(Conceptual only; not architecture.) **[I]**

1. **Separate knowledge by epistemic type, not by toolkit.** The source mixes: (a) principles, (b) hard gates, (c) diagnostic mappings, (d) templates/data-collection schemas, (e) guideline ranges (disclaimed), (f) worked examples, (g) prompt scaffolds. Each needs different treatment: gates are near-deterministic; ladders are hypothesis generators; ranges must be presented as soft; examples must never be quoted as benchmarks.

2. **Preserve provenance and strength.** Each unit should carry source page, and a strength label such as *firm rule / guideline / illustrative / disclaimed*. The source flags its own strength often, and an agent that loses it will overstate.
3. **Model the business context as required input.** Nearly every rule depends on business type, funnel stages, qualification definition, guardrails and capacity (P7, P9). The agent will frequently need to say "cannot conclude yet; missing X", as the source's own prompts do (pp.92–93, 104).
4. **Treat the funnel as the central entity.** Metrics, symptoms and decisions all attach to funnel stages. Platform vs business metrics is the primary classification axis.
5. **Encode the behaviour rules from Toolkit 8 as the agent's output contract:** separate known/assumed/unknown; hypotheses with one controlled test; list what not to change; never scale on CPL alone; never invent proof; human decides.
6. **Resolve the 6A inconsistencies before encoding** (one canonical decision label set, one canonical check order).
7. **Keep the lifecycle as routing logic:** user intent (new client, existing account, creative, copy, diagnosis, scale, reporting) maps to a toolkit entry point, and the toolkits' dependencies imply prerequisite questions.
8. **Plan for a freshness boundary:** distinguish GoUp methodology (stable) from Meta platform facts (volatile, should be verified).

8. Questions for your review

1. For the 6A items, what should the canonical choice be (e.g. Diagnose vs Test; check order; 46–50 band)?
2. Should the agent treat the budget levels and % ranges as defaults to propose, or only as examples to explain? The source disclaims them but they are the most concrete guidance.
3. Do you want to supply minimum-data rules (conversions, days, spend) or keep the agent strictly "cannot conclude"?
4. Is the target user an agency marketer, a business owner, or both? The source is agency-voiced.
5. Should scope stay Meta-only and India-context, or generalise?
6. Which gaps in 6C should be filled by GoUp material versus left as explicit "outside framework" answers?
